Bible and Astronomy

bible-and-astronomy.neocities.org

The purpose of this website is to defend the scientific and theologically grounded doctrines of the Roman Catholic Church, particularly the doctrine of **Geocentrism**, which has been abandoned almost entirely by the so-called “faithful”, the clergy, and even those who call themselves “traditional” Catholics.

Among those traditionalists, the doctrines regarding the holy creation of God can still be found adhered to. This includes both the 6-day creation of the cosmos, as well as the young earth existence of the universe. So too is the denial of Darwinian evolutionary theory commonplace. But where is **Geocentrism**, which too should be believed?

Bible and Astronomy is dedicated to the scientific defence of traditional Catholic teachings in these matters. We affirm the creation of the universe taking 6 days of 24 hours each, we affirm the cosmos’ creation in the year 4004 BC, and we affirm the **neo-Tychonic** model of Geocentrism, including its **unmoving earth** at the **center** of the universe.
